Docuten complies with the **European Regulation (N°910 / 2014) of Electronic Signature, eIDAS** , as well as other international legislations.

Likewise, it bases its services to enjoy full legal validity and maximum control through its ISMS. Docuten has been awarded the certificate against the 27001 standard, which gives it a plus in terms of security.

Besides, you can also use the solution through a website, for those users who are not likely to use any ERP, allowing any user (through the access to Docuten's webiste) to conduct a complete management of the digital signature.

Docuten · General description · Legality Docuten is an easy to use SaaS platform which promotes the digital transformation of the entire business cycle, both of medium and big companies, whose main objective is to offer digital solutions that increases the productivity and generates a quick and efficient workflow.

Optimize administrative times and save money with Docuten

Transform your company in a more sustainable business

Use a secure and legal solution

With its digital signature solution, your customers will be able to send to sign, sign and compile all kind of documents, in a secure and legal way, properly complying with the digital regulation as eIDas.

According to the Spanish government, the digital signature is a group of electronical data which goes with or are related to a digital document, and whose functions are:

- Identify the signer in an unequivocal way.
- Guarantee the integrity of the signed document, i.e., ensures that the signed document is original and has not suffered any type of manipulation or disturbance from its signing date.
- Ensures the non-repudiation of the signed document: data used by the signer are exclusive and unique, therefore he/she can't claim that the document was not signed by him/her.

Consequently, digital signature is a mark in a digital format that identifies the person who accepts the document's content and guarantees its integrity.
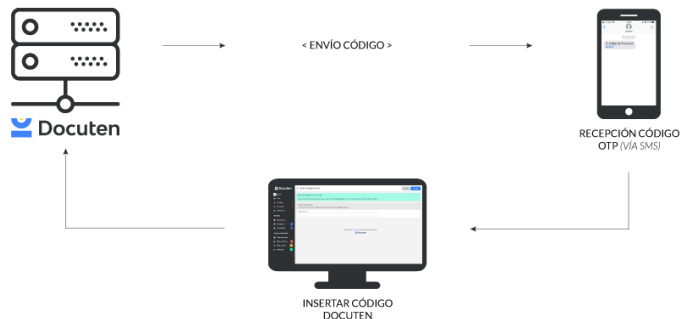

The legal validation of the digital signature is included in the European regulation (N°910/2014) of Electronic Signature, eIDAS, as well as other international legislations.

Docuten provides all type of legal signatures included in eIDas regulation. Through the solutions provided inside the platform, the client can sign all type of documents in an easy and simple way, with any device.

Docuten · Types of digital signature

- **Signature with OTP** (one-time password)

Signature with OTP (One-Time Password) is a digital signature made by sending a single-use code to the signer (in other words, the code only has validation for the signature or the specific document for which it has been demanded) and with a temporal validity, by SMS or email (it depends of the information indicated once created the signature's process)

- **Biometrical signature**

Biometrical signature is a solution that allows the user to sign documents through a handwritten signature in any mobile devices (tablet, smartphone) with total legal validity.

- **Signature with cloud certificate**

This type of signature makes possible using a digital signature issued in the name of the signer and hosted, in a secure way, in the Docuten's certificate store. There are two possibilities in this type of signature:

1. **Digital certificate hosted in Docuten**
   This type of digital qualified certificate has been previously issued by any certification authority (which could be the case of FNMT, for instance) in the name of the signer and it's related to his NIF.

2. **Not qualified digital certificate issued by Docuten in the name of the signer**
   This type of certificate will be generated in the case that any digital certificate related to the signer does not exist.

- **Qualified signature**

The qualified signature is made by a qualified electronical signature. This is the type of signature that counts with higher levels of legal guarantees and security according to the European regulation eIDAS.

a. Signature with an owned certificate in local

It is considered a signature with an owned certificate in local those that have been done with a qualified electronical certificate hosted in the signer's equipment. (he corregido la palabra certificate)

b. Qualified signature in the cloud

   i.   The new European regulation includes the possibility to generate and protect the qualified certificates hosted in the cloud, mandatorily using HSMs, a qualified device to create the signature

   ii. Since this certificate is in the cloud, and it remains safe, it prevents anyone, except the titular, from using it.

   iii. The possibility of doing a qualified signature from every device and place.
